

3/9/2025

I have been busy with preparing for exams and research, so I was not able to do much this week. The only major change I made is creating a new button that allows the user to choose which Chronos model they would like to use. It defaults to BOLT Tiny, but any of the sizes can be used. Although this feature is not very useful for our current local tests, it will be another customization option for the finished product.

☐ Enable sliding windows

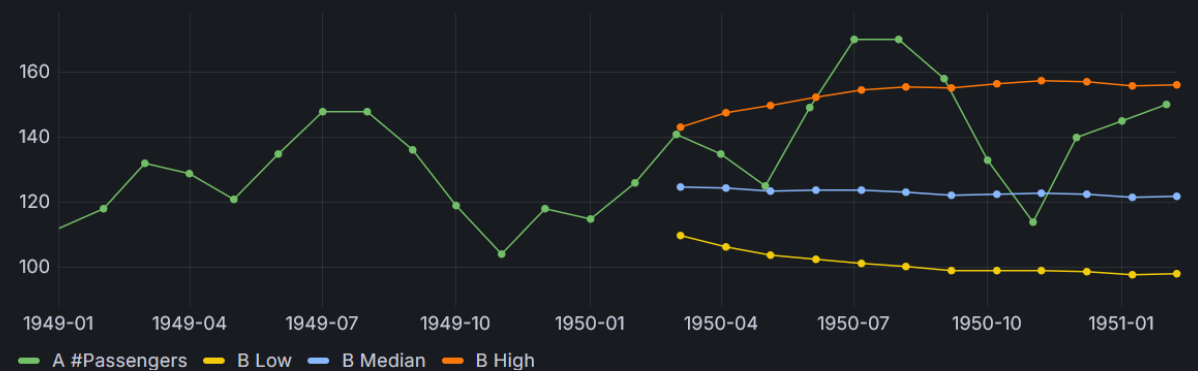

Chronos Model: BOLT Tiny ▼

Upload Method: Tiny ▼

- Tiny
- Mini
- Small
- Base
- Large
- BOLT Tiny
- BOLT Mini
- BOLT Small
- BOLT Base

I ran it with Chronos BOLT Tiny and Chronos BOLT Base, and as expected, Chronos BOLT Base took significantly longer. While the results between the two models are quite similar, I am inclined to say it is due to the small context window.

AirPassengers Panel (using chronos-bolt-tiny)

AirPassengers Panel (using chronos-bolt-base)
