This week, I worked on researching CSS and implementing changes to the UI design. The current UI design we had was a very basic one, so we needed to improve it. For this week I focused on the main visual aspects like changing the background color, improving font, size of text, and moving text around. In the upcoming weeks, I want to continue researching and implement more professional and complex changes to suit our needs. I'll ask the team for their feedback this week as well and ask what things they like, what they don't like, and if they have any ideas about how it should look like so I can implement them.

Benchmarking Large Language Models for Time Series Analysis
